

The Three Es of eConsult Excellence

Evidence-Based

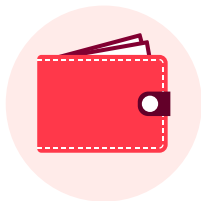

- Share advice that is **evidence-based** and relies on **current guidelines**.
- If there are multiple evidence-based options, **highlight these options** and **share your reasoning** for your recommendation.
- **Include references** to guidelines and studies where applicable.

Educational

- Answer all of the questions the PCP asks, using a **professional** and **cooperative** tone, while paying close attention to **punctuation** and **grammar**.
- Help clinicians understand the **reasoning** behind your advice with a concise, yet comprehensive response given the limited data.
- Provide **anticipatory guidance** by giving PCPs a succinct roadmap outlining patient management expectations moving forward.

Cost Effective

- Consider alternative pathways to **avoid wasted care**, minimize patient out of pocket costs, and share **lower cost generic** options of **classes of drugs** where appropriate.
- When possible, recommend a more **conservative** approach to care. If you recommend a referral of a more aggressive management, provide **evidence-based rationale** for your suggestion.
- **Address patient barriers to care** if provided. The majority of patients will have significant resource and access limitations.
